

Course Curriculum

- **Lesson 1: Course Introduction and Case 1 - Discussing a Patient with Asthma**
 - This lesson will go over the testing platform and discuss the management of a patient presenting with asthma including the physical exam, diagnostic testing, required imaging, treatment options, counseling, and monitoring.
- **Lesson 2: Case 2 - Discussing Tension Pneumothorax**
 - This lesson will go over a unique case presentation in which you reverse the order of certain management options. It is necessary to familiarize yourself with the management of acute life-threatening conditions such as tension pneumothorax. I will also show you how the software will respond if you manage the case incorrectly.
- **Lesson 3: Case 3 - Discussing Diabetic Ketoacidosis**
 - This lesson goes over a case of diabetic ketoacidosis. After watching this case, you will notice that there are several diagnostic tests, monitoring protocols, and treatment options that you need to order. It is good to practice with the software and feel comfortable with cases that have many orders.
- **Lesson 4: Case 4 - Discussing Eclampsia**
 - This lesson goes over an OB-GYN case of eclampsia including a physical exam, diagnostic testing, imaging, treatment options, counseling, and monitoring. I also repeat the same case while putting in the orders efficiently as if I was taking the real exam.
- **Lesson 5: Case 5 - Discussing Rheumatoid Arthritis**
 - This lesson goes over a case of rheumatoid arthritis including a physical exam, diagnostic testing, imaging, treatment options, counseling, and monitoring. I will also show you how the software will respond if you manage this specific case incorrectly.

- **Lesson 6: Case 6 - Discussing Aortic Dissection**

- This lesson goes over a case of aortic dissection and a simulation of how the software responds when you take the wrong management route. I also repeat the same case putting the orders efficiently as if taking the real exam.

- **Lesson 7: STEP 3 CCS Crash Lesson**

- This lesson goes over high-yield concepts related to the diagnosis and management of 12 common CCS cases that you might encounter on your exam. Included cases are acute coronary syndrome, heart failure, renal failure, unconscious patient, anemia, thyroid disease, pneumonia, lower GI bleeding, upper GI bleeding, trauma, child abuse, and appendicitis/cholecystitis.
